(see AAX24813). The FCR product was used in the creation of mammalian expression vectors. zsig37 (see also AAW98013) can be used to modulate energy balance in mammals or to protect endothelial cells from injury. It can be used to modulate cellular metabolic reactions including adipogenesis, gluconeogenesis, glycogenolysis, lipogenesis, glucose uptake, protein synthesis, thermogenesis and oxygen utilisation. zsig37 may also modulate acetylcholine and/or norepinephrine release, and may find use as a neurotransmitter or as modulator of neurotransmission, as an antimicrobial agent or to modulate acetylcholine. Oligonucleotide ZC15035 was used as a primer, together ZC15721 (see AAX24821), in the PCR amplification of an fragment of human adipocyte-specific protein homologue (see AAX24813). The PCR product was used in the creati mammalian expression vectors. zsig37 (see also AAW9801 nutrient uptake.

due to, e.g. vascular reconstruction (angioplasty, coronary artery bypass graft, endarterectomy, microvascular repair or anastomosis of a consciular graft), trauma, stroke or aneurysm. The polypeptide is also cuseful for pacifying damaged collagenous tissues due to injury associated with ischemia and reperfusion (trauma injury ischemia, intestinal strangulation, or injury associated with pre- and consciulation, myocardial infarction, or post-trauma vasopasm. In particular, post-trauma vasopasm includes stroke, percutaneous crassiluminal angioplasty, endarterectomy, accidental vascular trauma or surgical-induced vascular trauma. The polypeptide may also be used for pacifying the surface of a prostatic biomaterial, where the surface of the prostatic biomaterial is coated with collagen or collagen crassilumination fibrin or fibronectin. Finally, the polypeptide is useful for mediating wound repair, where the polypeptide enhances the progression of wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               zsig37 polypeptide an adipocyte complement related protein, and is an inhibitor of haemostasis and immune functions. The zsig37 protein is useful for promoting blood flow in the vasculature, where the polypeptide reduces thrombogenic and complement activity by the inhibition of the complement pathway and inhibiting collagen-mediated platelet adhesion, activation or aggregation. The methods are useful for treating injuries
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; single nucleotide polymorphism; SNP; RANGAP1; haplotyping

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (SNPB) in the human Ran GTPase activating protein 1 (RANGAP1) gene located on chromosome 22q13.2-q13.31, and methods for haplotyping and/or genotyping the RANGAP1 gene. The methods of the invention make use of allele-specific oligonucleotides (ASOs) as probes and primers and/or primer-extension oligonucleotides for detecting the RANGAP1 gene polymorphisms. The polymucleotides and screened compounds are useful for treatment of diseases associated with RANGAP1 activity, such as cancer and other disorders associated with an irregular cell cycle. AAS19743-AAS19820 represent ASO primers for detecting human RANGAP1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 15 BP; 0 A; 6 C; 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      gene polymorphisms.
nucleotide sequence can be used in the detection of a determinant in pathogenic bacteria.
                                          plasmid DNA from clone pARC25 was used as a template to amplify the apyrase gene, by PCR, using the primers in AAQ40879-80. The apyrase enzyme is associated with the virulence of all species of Shigella (e.g. S. flexneri, S. dysenteriae, S. sonnei, S. boydii and related entero-invasive E.coli (EIEC) strains. The apyrase
                                                                                                                                                                                                                  ATP di:phospho:hydrolase or apyrase DNA sequence and prods. used for detection, therapy and protection against Shigella entero-invasive E.coli strains
                                                                                                                                                                                                                                                                                                                                                                                                                                         26-NOV-1991;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A DNA sequence (AAQ64128) encoding a virulence-associated apyrase (ATP-diphosphohydrolase) in Shigella spp. and enteroinvusive Escharichia coli was located in S. flexneri plasmid pARC25. The 20 N-terminal amino acids of apyrase are given in sequence AAR54083 (positions 1-20 of the full apyrase sequence, AAR54082). The gene encoding apyrase was closed by PCR amplification of pARC25 DNA using the primers given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New DNA encoding virulence associated ATP disphosphoshydrolase - useful as hybridisation probe for specific detection of virulent Shigella sp. and enterosinvasive E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Apyrase; ATP-diphosphohydrolase; virulence; Escherichia coli; Shigella; probe; hybridization; plasmid pARC25; primer; PCR; polymerase chain reaction; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 21 BP; 3 A; 8 C; 7 G; 3 T; 0 other;

These primers were based on sequences derived from the SAR-55 strain and a strain from Burma (BUR-121). The amplified sequence contains three open reading frames (ORFS). The proteins encoded by this sequence can be used to attimulate the production of protective antibodies upon injection into a mammal that would serve to protect the mammal upon challenge with wild type HEV. The proteins can be used for detection and diagnosis of HEV infection. This cDNA was isolated from primates innoculated with stool suspensions obtained from hepatitis E patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 25 BP; 4 A; 6 C; 10 G; 5 T; 0 other;

The protein encoded by the structural region of the virus (i.e. ORF-2), which is capable of forming HEV like particles, is useful for the detection of HEV antibodies (pref. 19G or 19M) in blood, plasma, sera, cerebrospinal fluid, tissue, urine or pleural fluid. The protein, and anti-HEV antibodies generated using the protein, can also be used in vaccines for immunising an animal against HEV infection. The protein is identified as a band of greater than 50 kD following SDS-PAGE of cell lysates of insect cells infected with a HEV ORF-2 contg. baculovirus, i.e. the claimed recombinant expression vectors pPIC9-1779, -1780 and -1781.
                                                  New hepatitis E virus DNA from Pakistani strain SAR-55 - used for, e.g. developing products for diagnosis of, and vaccination against hepatitis E virus infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   reading frame (ORF) proteins ORF-1, ORR-2 and ORF-3. A host organism transformed or transferted with a recombinant expression vector containing the SAR-55 nucleic acid can be used to produce the HEV proteins, especially ORF-2 protein. The recombinant HEV proteins can be used as diagnostic agents and as vaccines for use against HEV infection. The detection of antibodies specific for HEV can be used for the diagnosis of infection and diseases caused by HEV, and for monitoring the progression of such disease. Such methods are also useful for monitoring the efficacy of therapeutic agents during the course of treatment of HEV infection and disease in a mammal. The antibodies can be used for detection or for passive immunisation of mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            28-DEC-1992;
15-JUL-1993;
19-NOV-1993;
                                                                      A probe was constructed which corresponded to the N-terminal part of the alkaline protease (AP) gene of Bacillus licheniformis SE2. The probe (BAQ68697) localised the N-terminal part of the gene to a 5.5kb PstI fragment as part of a procedure for preparing a deletion plasmid for deleting the AP gene from B.licheniformis SE2.
        Sequence 18
                                                                                                                                                                                                                                                                                                                                                                                                              New pullulanase from Bacillus deramificans - for starch saccharification etc., with good stability over wide temp. ranges, also related DNA vectors, transformed cells etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic.

The amplified cDNA was cloned into vector pRSET and used to transfect E. coli JM109 for the prodn. of poly(His)-tagged CDC27 fusion protein. CDC27 can be used in novel cell-free ubiquitin-conjugating systems for the detection of inhibitors of ubiquitin-mediated proteolysis of cell cycle regulatory proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Detecting inhibitors of ubiquitin-mediated proteolysis of CCRPs used in the treatment of proliferative and/or differentiation diseases, and in modulation of apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CCRP; inhibitor; apoptosis; cell differentiation; primer; PCR, polymerase chain reaction; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     transformed with the p-cresol utilizing (pcu) genes are useful for producing para-hydroxybenzoate (PHBA) which can be used for synthesizing liquid crystal polymers (LCP). The sequences given in ABA98235-ABA98331 represent primers for; pcu sequencing, cloning of the p. putida pchC gene, sequencing tmox, cloning pcu for insertion into pMC3, construction of plasmids ppCUR1 and 2, mapping the transcript pMC3, construction of pcbA and B genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pacterial toluene monooxygenase enzyme pathway. The nucleic acid fragment encoding fragments of the invention may be used to isolate genes encoding proteins from the same or other microbial species. Bacterial strains transformed with the p-cresol utilizing from the same or other microbial species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid fragments encoding bacterial toluene monooxygenase enzyme pathway, useful for isolating genes encoding proteins from the same or other microbial species, and for producing para-hydroxybenzoa

This invention describes a novel method for identifying an inhibitor potentially useful for treatment of cancer, where the inhibitor is active on a gene vital for cell growth or viability, and where the growth or viability, and where the growth or viability.

gene

for blocking the

metastatic cascade

This sequence represents a 3' splice site from the human CAPL gene, and is targeted by the oligonucleotide of the invention. The oligonucleotide inhibits expression of mRNA encoding CAPL (a calcium-binding protein of the S100 family) and has a sequence complementary to a sequence of the CAPL mRNA. The oligonucleotide may be used for inhibiting expression of CAPL mRNA in a cell-free reaction mixture or in a cell in vitro or for treating metastatic cancer. The oligonucleotide provides a novel method

The products and methods can be used in the diagnosis, prevention and treatment of LOH disorders, concern, atherosclarotic plaques, premalignant metaplastic or disease, and graft versus host disease. The method can also be used to remove malignant cells from bone marrow transplants. AAZ25812-Z26825 cc. represent human polymorphic sites described in the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention provides synthetic oligonucleotides which are complementary to and inhibit expression of human CAPL mRNA that includes the 3' or 5' splice site or the translational start site. The oligonucleotides prevent translation and splicing of RNA and can be used as antisense or triplehelix forming oligonucleotides to treat metastatic cancer.

CC the gene encoding EDN, ECE or EDNR (III) or a vector (III) expressing (I), cor (III) is useful for producing cells capable of expressing a molecular variant polypeptide which is associated with a cardiovascular disease. CC (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing and complexity of a molecular variant gene comprising (I) is useful for identifying and cobtaining a pro-drug or drug capable of the EDN/EDNR/ECE signaling system or its gene product, or for identifying and obtaining an inhibitor of the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product. The isolated proteins and companing system or its gene product. The isolated proteins and companing system or its gene product. The isolated proteins and composition for treating a cardiovascular disease such as coronary heart disease, hypertension, atherosclerosis, or related to comparising system are useful as cardiovascular disease of the EDN/ECE/EDNR signaling system are useful as forensic markers, for creating a transgenic animal and in creation of a solid support comprising polynucleotides, genes, vectors, polypeptides, antibodies or identify single nucleotide polymorphisms in DNA encoding pathway.

CC cardiovascular regulator proteins of the EDN/ECE/EDNR signaling pathway.

(I), CC the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I) CC or (II) is useful for producing cells capable of expressing a molecular variant polypeptide which is associated with a cardiovascular disease. (C (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing a molecular variant gene comprising (I) is useful for identifying and cc obtaining a pro-drug or drug capable of modulating the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product. The isolated proteins and CC the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product. The isolated proteins and CC sharmaccutical composition for treating a cardiovascular disease such as CC compary heart disease, hypertension, atherosclerosis, or related to CC abnormal angiogenesis or fatty acid metabolism e.g. diabetes and familial CC (EDN/ECE/EDNR signaling system are useful as forensic markers, for CC creating a transgenic animal and in creation of a solid support compositions of the compositions of the composition and in creation of a solid support compositions of a solid support compositions and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid support compositions and and in creation of a solid supp

                                                                                                                                                                                                   CC (EDN)/pendothelin converting enzyme (ECE)/receptors of EDN and ECE (EDNR) CC signaling system which is associated with a cardiovascular disease. (I), CC the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing a molecular variant polypeptide which is associated with a cardiovascular disease. (C) (II) is useful for producing cells capable of expressing a molecular variant polypeptide which is associated with a cardiovascular disease. (C) (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing and conclecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or the gene product, or for identifying and obtaining an inhibitor of the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product, or for identifying and obtaining an inhibitor of the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product. The isolated proteins and CC polymucleotides encoding them are useful for preparation of a polymucleotide composition for treating a cardiovascular disease such as CC comparation and angiogenesis or fatty acid metabolism e.g. diabetes and familial hypercholasterolasmia. The gene or a polymucleotide fragment of the EDN/ECE/EDNR signaling system are useful as forensic markers, for creating a transgenic animal and in creation of a solid support
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ABK94175 standard; DNA; 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABK94175;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polynucleotide of the endothelin/endothelin converting enzyme/receptors of endothelin and endothelin converting enzyme signaling system associated with cardiovascular disease, useful treating the disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Endothelin receptor B (EDNRB)

CC (EDN) endothelin converting enzyme (ECE)/receptors of EDN and ECE (EDNR)
CC signaling system which is associated with a cardiovascular disease. (I),
CC the gene encoding EDN, ECE or EDNR (II) capable of expressing (I)
CC or (II) is useful for producing cells capable of expressing a molecular
CC variant polypeptide which is associated with a cardiovascular disease.
CC (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing
CC a molecular variant gene comprising (I) is useful for identifying and
CC obtaining a pro-drug or drug capable of modulating the activity of a
CC molécular variant of a polypeptide of the EDN/EDNR/ECE signaling system
CC or its gene product, or for identifying and obtaining an inhibitor of
CC the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE
CC signaling system or its gene product. The isolated proteins and
CC polynucleotides encoding them are useful for preparation of a
CC comparising the encoding them are useful for preparation of a
CC comparished angiogenesis or fatty acid metabolism e.g. diabetes and familial
CC hypercholesterolaemia. The gene or a polynucleotide fragment of the
CC comprising polynucleotides, gene, vectors, polypeptides, antibodies or
CC comprising polynucleotides, gene, recetors, polypeptides, antibodies or
CC comprising polynucleotides, gene, vectors, polypeptides, antibodies or
CC consting a transgenic animal and in creation of a solid support
CC conformation of the invention. This sequence represents a PCR primer used
CC cardiovascular regulator proteins of the EDN/ECE/EDNR signaling pathway.

CC cardiovascular regulator proteins of the EDN/ECE/EDNR signaling pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polymucleotide of the endothelin/endothelin converting enzyme/receptors of endothelin and endothelin converting enzyme signaling system associated with cardiovascular disease, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Endothelin; EDN; endothelin converting enzyme; ECE; endothelin receptor; EDNR; signaling system; cardiovascular disease; coronary heart disease; hypertension; atheroscierosis; angiogenesis; fatty acid metabolism; diabetes; familial hypercholesterolemia; forensic marker; transgenic animal; solid support; cardiovascular regula:or; SNP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAV41141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a 3' splice site from the human CAPL gene, and is targeted by the oligonucleotide of the invention. The oligonucleotide inhibits expression of mRNA encoding CAPL (a calcium-binding protein of the S100 family) and has a sequence complementary to a sequence of the CAPL mRNA. The oligonucleotide may be used for inhibiting expression of CAPL mRNA in a cell-free reaction mixture or in a cell in vitro or for treating metastatic cancer. The oligonucleotide provides a novel method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Oligo:nucleotides inhibiting expression of CAPL \mathfrak{m}\mathtt{RNA} treating metastatic cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a 3' splice site from the human CAPI gene, and is targeted by the oligonucleotide of the invention. The oligonucleotide inhibits expression of mRNA encoding CAPI (a calcium-binding protein of the S100 family) and has a sequence complementary to a sequence of the CAPI mRNA. The oligonucleotide may be used for inhibiting expression of CAPI mRNA in a cell-free reaction mixture or in a cell in vitro or for treating metastatic cancer. The oligonucleotide provides a novel method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          04-AUG-1998

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention provides synthetic oligonucleotides which are complementary to and inhibit expression of human CAPL mRNA that includes the 3' or 5' splice site or the translational start site. The oligonucleotides prevent translation and splicing of RNA and can be used as antisense or triplehelix forming oligonucleotides to treat metastatic cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New synthetic oligonucleotides complementary to buseful for inhibiting expression of s100 calcium the treatment of metastatic cancer

The invention provides synthetic oligonucleotides which are complementary to and inhibit expression of human CAPL mENA that includes the 3' or 5' splice site or the translational start site. The oligonucleotides prevent translation and splicing of RNA and can be used as antisense or triplehelix forming oligonucleotides to treat metastatic cancer.

                                                                                                                                                                                                                                                 Thirty PRO
The present invention describes an isolated antibody that binds to one of the human PRO proteins designated PRO212, PRO290, PRO341, PRO355, PRO619, PRO717, PRO809, PRO8010, PRO819, PRO1005, PRO1005, PRO1009, PRO1025, PRO10130, PRO10097, PRO1107, PRO1111, PRO1153, PRO1182, PRO1184, PRO1025, PRO1281, PRO23, PRO394, PRO1117, PRO11710, PRO2094, PRO2145 OR PRO2198. PRO antagonist Pens used to inhibit tumour cell growth. The PRO polypeptides and nucleotides are useful in the treatment, diagnosis and prevention of cancer. The antibodies and other anti-tumour compounds maybe used to treat various conditions, including those characterised by overexpression and/or activation of the amplified antibodies and other compounds include benign or malignant tumours (e.g., renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulva, thyroid, hepatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            proliferation; tumourigenesis; identification; cancer; PCR primer; hybridisation; probe; cytostatic; nootropic; neuroprotective; antiinflammatory; immunosuppressive; immunostimulant; antiangiogenic; leukaemia, lymphoid malignancy; neuronal disorder; glial disorder; estrocytal disorder; hypothalamic disorder; glandular disorder; astrocytal disorder; epithalamic disorder; stromal disorder; plandular disorder; epithalial disorder; stromal disorder;

AAC58242 to AAC58366 represent PCR primers and hybridalsation probes used in the isolation of the human PRO sequences. AAC58367 to AAC58396 and AAB24057 to AAB24089 represent human.
                                                                                                           PCR primers AAH78624-25 were used to amplify exon 3 of the human reduced folate carrier (RPC) gene. Detection of mutations associated with the RPC gene are edd to assess between responsiveness of a cancer patient to antifolate chemotherapy. The RPC gene is associated with folate metabolism. The method is useful for assessing the responsiveness of a cancer patient to antifolate chemotherapy.
                                                                                     Sequence 23
                                                                                                                                                                                                                                                    Assessing responsiveness of a cancer patient to antifolate-containing chemotherapy, comprising searching for mutation or mutations in a gene associated with folate metabolism or uptake in cells derived from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; reduced folate carrier gene; RFC gene; cancer;

                                                                                                                                                                                                                                                         CC The present invention relates to a method for ameliorating the effects CC of skin disorders. The method comprises contacting the skin with an CC antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 CC receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of cinhibiting or reducing growth factor mediated cell proliferation, CC inflammation and/or other disorders. The present sequence is an CC oligonucleotide which can be used to design the antisense CC oligonucleotide of the present invention (see AAP45151 and CC oligonucleotides of the present invention (see AAP45151 and CC oligonucleotides of the present invention (see AAP45151 and CC oligonucleotides, pityriasis, ruba, pilaris, serborrhoea, keloids, CC psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, CC eratiosis, neoplasias, scleroderma, warts, benign growths, cancers of the CC skin, a hyperneovascular condition such as a neovascular condition of the CC retina, brain or skin, growth factor-mediated malignancies, other CC sclerotic disease, kidney disease, hyperproliferation of the inside of CC blood vessels or any other hyperplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 37

                                                                                                                                                                                                                                                                            The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an CC antisense oligonuclectide, (for Insulin-like Growth Factor [IGF]-1 CC receptor, IGF binding protein [IGFBP]-2 or IGFBP3], which is capable of CC inhibiting or reducing growth factor mediated cell proliferation, CC inflammation and/or other disorders. The present sequence is an CC oligonuclectide which can be used to design the antisense CC oligonuclectides of the present invention (see AAF45151 and CC oligonuclectides of the present invention (see AAF45151 and CC oligonuclectides of the present invention (see AAF45151 and CC oligonuclectides of the present invention (see AAF45151 and CC oligonuclectides of the present invention (see AAF45151 and CC oligonuclectides of the method is useful for ameliorating the effects of CC oligonuclectides of the present invention of the solution in the present invention of the condition of the skin, a hyperneovascular condition such as a neovascular condition of the cretina, brain or skin, growth factor-mediated malignancies, other condition or skin, growth factor-mediated malignancies, other the condition of the conditi

The antibodies comprise chimeric L and/or H chains, where the C region is of human and L region of mouse, origin. The present sequence represents a PCR primer used in an example of the present invention. Host cells, transformed with vectors containing DNA encoding antibodies of the invention, can be used to produce the antibodies. The antibodies may be used to treat hypercalcaemia, especially that due to a malignancy, e.g. cancers of pancreas, lung, throat, larynx, tongue, gum, ossophagus, stomach, liver, breast, kidney, bladder, womb or prostate or malignant lymphoma. They may also be used for treatment of hypophosphaemia such as that due to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chimeric; antibody; human parathormone related peptide; hPTRP; mouse; L chain; H chain; hypercalcaemia; cancer; malignant lymphoma; CDR; hypophosphaemia, pathogen; vitamin D resistance; V region; C region; humanised; PCR primer 88.

                                                                                                                                         parathyroid hormone related peptide (PMRP) to its receptor, as an active component. This substance may be an antagonist to the receptor, or an antibody (preferably monoclonal) or antibody fragment, recognising PMRP. The antibody is preferably humanised or chimeric. The present invention also describes a humanised antibody prepared by hybridoma 23-57-137-1 (FERM BP-5631). The composition is used for the treatment of cachexia arising in connection with diseases such as cancer, thereby improving the quality of life of the patient. The present sequence represents a PCR primer used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                 Inhibitors of binding of parathyroid hormone related peptide to its receptor - useful for, e.g. treatment of cachexia arising from cancer or other diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ishii K,
